Internal Control: Providing a Foundation for Accountability in Government

An introduction to internal
control for managers in
governmental organizations

International Organization of
Supreme Audit Institutions

Overview

“Internal control is a management tool used to provide reasonable assurance that management objectives are being achieved.”

Guidelines for Internal Control Standards,
INTOSAI

Managers are responsible for establishing an effective control environment in their organizations. This is part of their stewardship responsibility over the use of government resources. Indeed, the tone managers set through their actions, policies, and communications can result in a culture of either positive or lax control. Planning, implementing, supervising, and monitoring are fundamental components of internal control. You may go about these activities routinely, without thinking of them as part of a broad control environment that helps to ensure accountability. But they are.

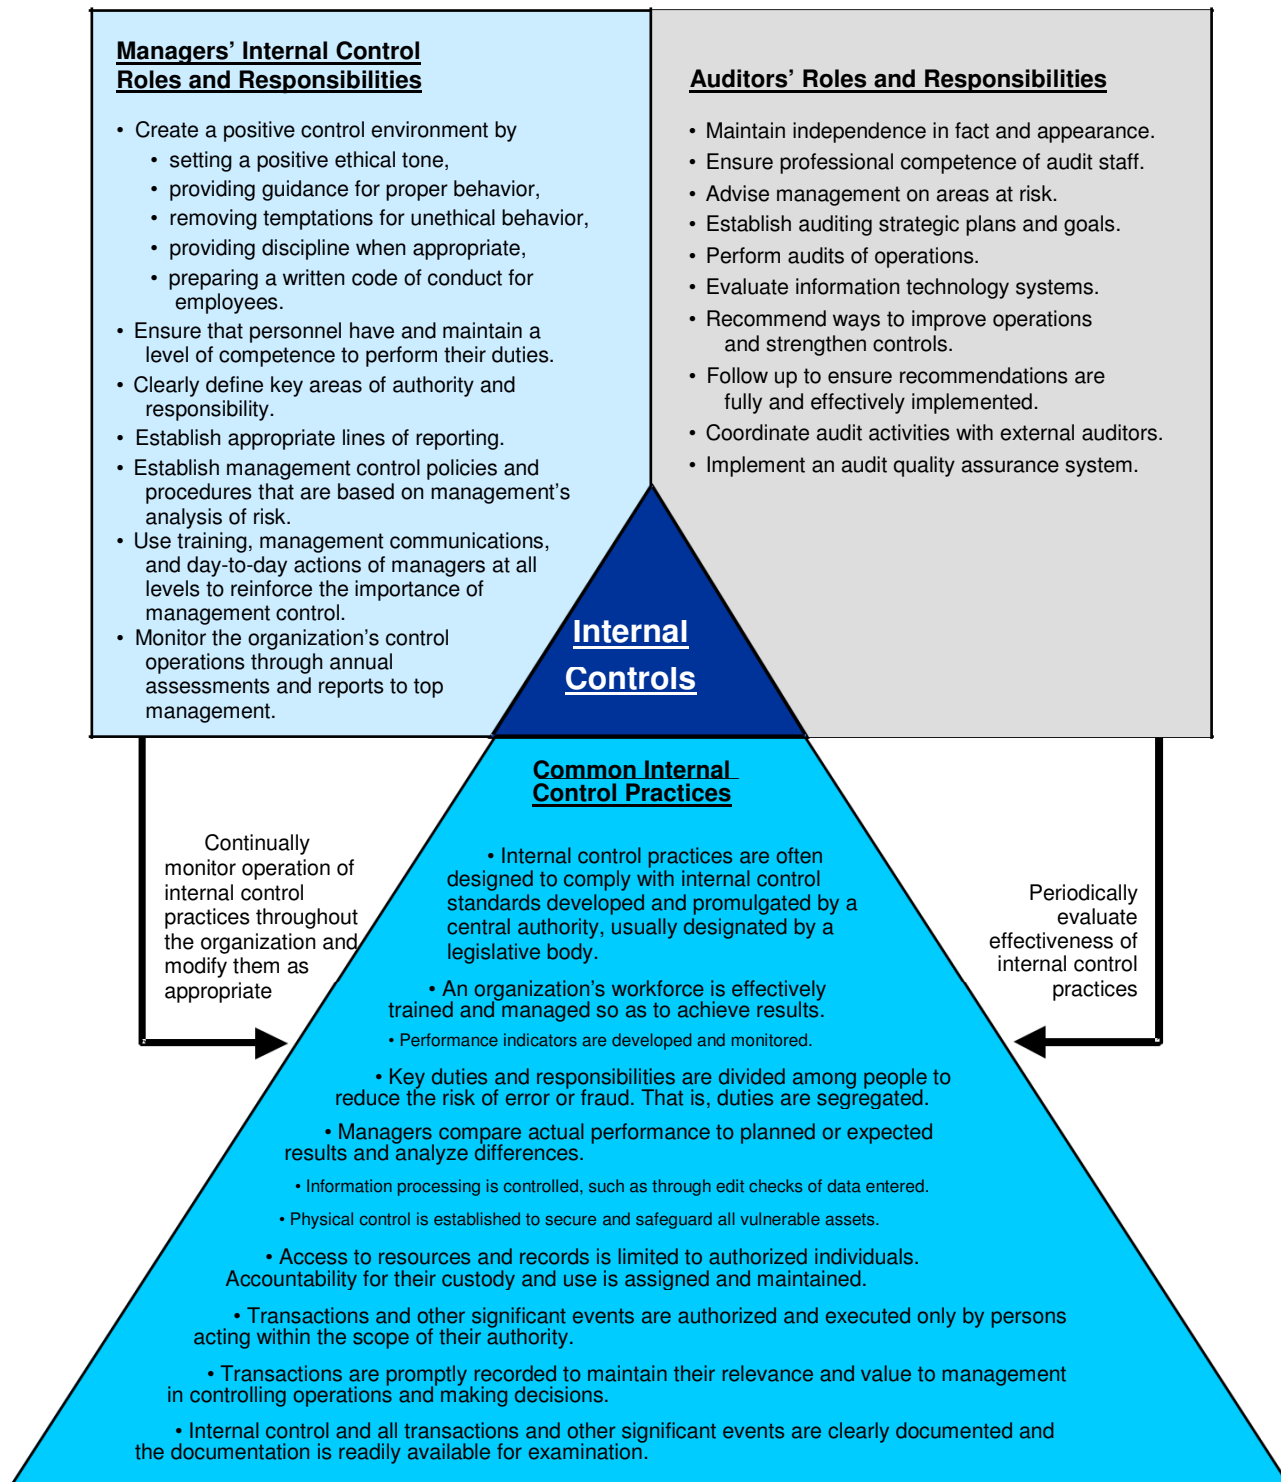

Internal control, or management control, helps to provide reasonable assurance that the organization

- adheres to laws, regulations, and management directives;
- promotes orderly, economical, efficient, and effective operations and achieves planned outcomes;
- safeguards resources against fraud, waste, abuse, and mismanagement;
- provides quality products and services consistent with the organization’s mission; and
- develops and maintains reliable financial and management information and fairly discloses that data through timely reporting.

Therefore, it is essential that all managers in an organization understand the importance of establishing and maintaining effective internal control. For this reason, the Internal Control Standards Committee of the International Organization of Supreme Audit Institutions (INTOSAI) has prepared this booklet to

- provide an overall framework for establishing and maintaining effective internal controls,
- describe internal control roles and responsibilities for government managers and auditors,
- describe common internal control practices,
- provide a simple checklist to help you begin thinking about whether your organization has taken appropriate steps to ensure effective internal control, and
- provide a list of references for further information.

Framework for Establishing and Maintaining Effective Internal Control

Managers

Managers should realize that a strong internal control structure is fundamental to control of an organization and its purpose, operations, and resources.

Responsibility for providing an adequate and effective internal control structure rests with an organization's management. The head of each governmental organization must ensure that a proper internal control structure is instituted, reviewed, and updated to keep it effective. A positive and supportive attitude on the part of all managers is critical. All managers must be individuals of personal and professional integrity. They are to maintain a level of competence that allows them to understand the importance of developing, implementing, and maintaining effective internal controls.

Management establishes an independent audit function as a key part of the internal control structure. Management should establish objectives for the audit function and place no restrictions on auditors in meeting them. To ensure independence, the head of this audit unit should report directly to the manager heading the agency. Management should also select an experienced, well-qualified person to lead the unit and provide sufficient resources and a competent staff to carry out audit operations. In this regard, managers work constructively with auditors to identify risks and design mitigating controls, and they give auditors responsibility for periodically evaluating internal control operations to identify weaknesses and recommend corrective measures.

Auditors

Management often establishes an audit unit as part of its internal control and self-assessment framework.

Auditors are a part of a governmental organization's internal control framework, but they are not responsible for implementing specific internal control procedures in an audited organization. That is properly management's job.

The auditors' role is to audit an organization's internal control policies, practices, and procedures to assure that controls are adequate to achieve the organization's mission. Although auditors may be part of the organization they audit, it is important and necessary that the auditors' independence be maintained.

For its part, management can demonstrate its support by emphasizing the value of independent and objective auditing. Management should also identify areas for improving performance quality and respond to information developed through audits.

An external audit unit may also play a role in auditing a governmental entity's internal control.

Most governmental entities are also audited by an external audit function. This external auditor is often appointed by, and reports to, the oversight body to which an entity is responsible. This external auditor may examine and suggest improvements to a governmental entity's internal control.

Internal Control

Simply defined, internal control is the process by which an organization governs its activities to effectively and efficiently accomplish its mission.

Internal control should not be looked upon as separate, specialized systems within a governmental organization. Rather, internal control should be recognized as an integral part of each system that management uses to guide its operations.

Establishing effective internal control involves an assessment of the risks the agency faces from both external and internal sources. A precondition to risk assessment is the establishment of clear, consistent entity objectives, which are the goals or purposes to be achieved. Risk assessment is the identification and analysis of relevant risk associated with achieving the objectives. Internal control practices (such as procedures, processes, physical arrangement, organizational structure, and assignment of responsibility and authority) should then be designed and implemented to achieve the goals.

Also, information should be recorded and communicated in writing to management and others within the entity who need it and within a time frame that enables them to carry out their internal control and other responsibilities. Internal control monitoring should assess the quality of performance over time and ensure that the findings of audits and other reviews are promptly resolved.

Checklist for Managers

In establishing your framework, have you

- Assessed the risks the organization faces?
- Identified control objectives to manage the risks?
- Established control policies and procedures to achieve the control objectives?
- Created a positive control environment?
- Maintained and demonstrated personal and professional integrity and ethical values?
- Maintained and demonstrated a level of skill necessary to help ensure effective and efficient performance?
- Maintained and demonstrated an understanding of internal controls sufficient to effectively discharge responsibilities?

For implementing internal control, have you

- Adopted effective internal control throughout the organization?
- Based the organization's internal control on sound internal control standards?
- Included in the organization's internal control structure appropriate and cost-effective control practices?
- Prescribed control practices through management directives, plans, and policies?
- Established a means of continually monitoring the operation of the organization's internal control practices?

Concerning the audit function, have you

- Shown an understanding of the difference between internal control and audit?
- Recognized that an audit function is integral to your organization's internal control?
- Established an audit function?
- Ensured the audit organization's independence?
- Given the audit organization responsibility for evaluating the effectiveness of the audited organization's internal control practices?
- Established a system to monitor the organization's progress in implementing internal and external auditor recommendations?
